

~~WUW~~

8610 - Session # 4  
(CONT.)

~~at project~~ One project might involve an individual in the building monitoring or coordinating the activities of persons who ~~are~~ located 'outside' the facility; & who record, analyze, develop activities relating to 'hard science / technological things' and the ~~also~~ associated idea of "finding things out."

The structure itself is 'technically' oriented, involving technical equipment, but this interest extends into greater socio-economic spheres exterior to structure. 'Makes connections anywhere it can.' This agency "takes action" rather than produces an end product (whether tangible or informational).

1 year from now, effort still continues, but is scaled back - as if part of resources has moved to another place to form a sister agency facility.

mission

Structure is "technical" - contains technical equipment, but interest in "technical" extends into socio-economic sphere external to structure. Makes connections anywhere it can.

Takes action - doesn't "produce" as primary function. Can cooperate/resignate ~~at~~ non-organic elements if necessary.

As Bk  
reminds  
me of tech  
SVC's report

Spl/2 reminds me strongly of tech services people who go provide support to agencies who have discovered a "bug" or need electronic OPSEC sppt they can't handle themselves.

1 yr from now, effort still continues but less intense - as it part of element has been moved to another place as core to form sister facility.

comfortably appointed. Don't pay attention  
to surroundings. They have equipment  
they monitor. May wear headphones.

Summary

People w/in structure walk around, sit, wear greyish clothing, have short hair, are predominantly males, operate equipment, often work individually but consult w/ each other; work at console. Facility has an ~~open~~ ongoing mission involving diverse projects + operations, people are serious, relatively humorless, dedicated & believe in what they're doing.

A project might involve an individual in the bldg monitoring or coordinating the activity of person(s) exterior to facility. Exterior people record, analyze, develop, activities are related to "hands-on"/technological things, + the idea of "finishing things out."

Structure itself is "technically" oriented, involving technical equipment, but interests in "technical" extend into greater social-economic sphere exterior to structure. Makes connection w/ where it can. Agency "takes action" rather than produces end product (whether tangible or informational).

1 yr. from now, effort still continues, but is ~~stated~~ scaled back - as if part of resources has moved to another place as ~~core~~ <sup>core</sup> to form sister agency/facility.
